Artur Yaroshenko

WEB SOFTWAER DEVELOPER

SUMMARY

My name is Artur. I've been doing web development for more than 7 years. I mostly write in typescript, python and golang. In my spare time I do open source contributing and run a small blog - https://du-blog.ru.

During my practice I've dealt with big enterprise projects as well as small startups, which I had to finish as prototype as soon as possible. My soft skills are: communication skills, curiosity and pragmatic approach, desire to learn and study. I love working in a team, but I can also work independently. To achieve my goals I use planning methods, Objective Key Result, as well as ORG mode (a format similar to markdown which allows you to structure your thoughts and objectives) and org-roam.

In my work I try to use only the best practices and tools, which allow me to achieve my goals quickly (emacs, magit, vim keybindings etc). I also solve algorithmic problems on codewars, leetcode and other platforms. In long-playing projects I always try to write easy to read and understandable code, which is easy to maintain. Often it follows S.O.L.I.D principles as well as some elements of extreme programming (it depends on the project, I prefer to use TDD and pair programming in complex projects). I try to find a balance between the time spent on the task and the result which can potentially save me a lot of development effort.

I prefer to write reusable and versatile code which is open to extensions and closed to changes.
